

ODAY TAREK HANAFI

Full-Stack Developer

October, El Giza, Egypt | +20 114 377 6030 odaytarek62@gmail.com | [GitHub: AKira0169](#) | [LinkedIn: odaytarek](#)

PROFESSIONAL SUMMARY

Full-Stack Developer with 3+ years of experience building scalable web and mobile applications. Proven track record of delivering production systems end-to-end: React Native mobile apps, Next.js dashboards, and NestJS microservices. Expert in event-driven architecture with RabbitMQ, real-time systems, and cloud deployments on GCP with Kubernetes. Specialized in building complete product ecosystems from backend APIs to consumer-facing mobile applications.

TECHNICAL SKILLS

Category	Technologies
Backend	NestJS, Node.js, Express, Go (Gin), Microservices, RabbitMQ, CQRS
Frontend	React, Next.js 16, Vue.js, Nuxt.js, TanStack Query, TypeScript
Mobile	React Native, Expo, Redux Toolkit, Firebase Cloud Messaging
Databases	PostgreSQL, MongoDB, Redis, TypeORM, Mongoose, Drizzle ORM
Cloud & DevOps	Google Cloud Platform, Kubernetes, Docker, Nginx, CI/CD, Semantic Release
Architecture	Turborepo Monorepos, Event-Driven Systems, CASL Authorization, OAuth 2.0
Integrations	Stripe, Paymob, Google/Apple Sign-in, Firebase, SendGrid, Google Maps

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Mantaray Digital Solutions

Dec 2024 - Present

- Built complete product ecosystems: React Native mobile apps, Next.js admin dashboards, and NestJS microservices backends
 - Architected microservices using NestJS with CQRS pattern and RabbitMQ, processing 10K+ async events daily
 - Reduced API response times by 40% through Redis caching, query optimization, and efficient pagination strategies
 - Designed Turborepo monorepo architecture with shared packages, reducing code duplication by 60% across projects
 - Managed GCP deployments with Kubernetes, achieving 99.9% uptime with auto-scaling and zero-downtime deployments
 - Implemented automated release workflows using Semantic Release with Conventional Commits
 - Integrated third-party services: Stripe payments, Google/Apple OAuth, Firebase push notifications, Google Cloud Storage
-

KEY PROJECTS

Yallapass | Studio & Fitness Class Booking Platform

Tech Stack: React Native (Expo), Next.js 16, NestJS, MongoDB, Redis, RabbitMQ, Firebase **Role:** Full-Stack Developer **API:** staging.api.yallapass.app | **Dashboard:** staging.dashboard.yallapass.app

- Built complete platform ecosystem: React Native mobile app + Next.js admin dashboard + NestJS API
- Developed 20+ backend modules: bookings, credits system, subscriptions, referral codes, studio management, reviews, notifications
- Implemented credit-based booking system with subscription tiers and promotional codes
- Integrated Firebase Cloud Messaging for real-time push notifications to mobile users
- Built Google/Apple Sign-in authentication with secure JWT refresh token rotation
- Designed admin dashboard with Ant Design and Chart.js for analytics and studio management
- Configured EAS Build for staging/production APK and iOS builds with environment variants

Signature-Stays | Vacation Rental Platform (Airbnb-style)

Tech Stack: NestJS, Next.js 16, MongoDB, Redis, RabbitMQ, Google Maps **Role:** Full-Stack Developer **Live:** signaturestays.io

- Built production rental platform with 3 applications: customer frontend, host dashboard, and API backend
- Developed booking system with calendar availability, cancellation policies, and promo codes
- Implemented CASL-based role authorization for guests, hosts, and administrators
- Built property management with drag-and-drop image reordering (dnd-kit) and Google Maps

integration

- Integrated iCal calendar sync for external booking platform compatibility
- Deployed to production serving real users with GCP infrastructure

Hommio | Property Management Platform

Tech Stack: Turborepo, NestJS, Next.js 16, MongoDB, Redis, Stripe, CASL **Role:** Lead Developer

- Architected Turborepo monorepo with shared TypeScript packages (@repo/shared, @repo/api-client, @repo/eslint-config)
- Built 24+ API modules: properties, bookings, payments, invoicing, analytics, messaging, support tickets, wishlists
- Integrated Stripe for secure payment processing with webhook handling and Paymob for Egyptian market
- Implemented multi-currency support, commission rules engine, and dynamic pricing
- Built Next.js 16 frontend with next-intl internationalization and Playwright E2E testing
- Configured rate limiting with @nestjs/throttler and health checks with @nestjs/terminus

MoneyManager | Personal Finance Application

Tech Stack: NestJS, PostgreSQL, TypeORM, Redis, RabbitMQ, GCP **Demo:**

staging.money.manger.mantaray.digital/api

- Built comprehensive finance tracking: accounts, transactions, budgets, goals, recurring transactions
- Designed PostgreSQL schema with TypeORM migrations for transaction categorization and analytics
- Implemented event-driven architecture for real-time balance updates across accounts
- Integrated Google Cloud Storage for receipt and attachment uploads

Doctech | Clinical Management System

Tech Stack: Node.js, MongoDB, Socket.io **Live:** doctech.nl

- Developed real-time patient management with appointment scheduling and live dashboard updates
- Implemented role-based access control for doctors, nurses, and administrative staff
- Built Socket.io integration for instant notifications across clinic workstations

EDUCATION

Bachelor of Science in Computer Science

Ain Shams University | Oct 2020 - May 2024 Grade: Good

LANGUAGES

- Arabic: Native
 - English: Professional Proficiency
-

CURRENTLY LEARNING

Go (Golang): Building backend APIs using Gin framework with PostgreSQL and Redis. Exploring concurrency patterns (Goroutines, channels) for high-performance microservices.
